Abrasives deliver the final punch in air-blasting, but while doing their job, they exact a toll on the equipment that delivers the goods.

Media reclaimers, which separate functional abrasives from dust and debris, often take the biggest hit because they operate nonstop during air blasting. The most vulnerable surface within a cyclonic reclaimer resides at the end of the inlet opening where air and media abruptly change direction. In the case of Empire's cyclonic reclaimers, we offer three options for added protection against this **hard turn**. Selecting one can extend reclaimer life by ten times or more.

1 Inlet wear plate protects vulnerable areas. Easy to replace.

2 Urethane coating extends the service life of interior surfaces by five times. (Not shown)

3 Ultra-wear lining, the most durable choice, increases equipment life by a factor of ten — **often more!**

Rubber curtains shield cabinet interior from ricocheting media.

YES, we provide many other options for tough finishing jobs that can enhance your investment in Empire equipment.

- Our white-rubber curtains not only protect cabinet interiors, they also improve visibility for the operator.
- Perforated or plastic overlays retard clouding and pitting on viewing windows.
- Special matting extends the life of turntables and cabinet floors.
- Tungsten- and boron-carbide blast nozzles last and last, even with harsh abrasives.

If you face a demanding finishing schedule, particularly with harsh abrasives, our extended-wear options will boost your bottom line.

To learn more about Empire's extended-wear options or any of Empire's air-blast products, please contact your local Empire distributor or Empire directly. Our communication links are shown below.
